To: Whom it may concern

My uncle (an RC plane enthusiast) past away a couple of years ago and my aunt has asked me to help her sell the 3 planes in his collection. My E-mail only allows me to send 3 photos at a time. The first 2 photos are of a kit that was never assembled. There is no motor or electronics for this plane but it does have the cockpit interior kit which is not pictured here. The 3rd photo is of 2 complete planes that are ready to fly. The one in the background is his original trainer. It shows some minor wear but has never been crashed. It has a 61.5" wing and the fuselage is appox. 49" long. The plane closest to the camera is a Hobbico Superstar 60. It has a 69" wing and 55" fuselage. It is in excellent condition and may not have ever been flown. I believe the motor is a S61K. Both transmitters are Futaba. The one in back is a Conquest FP-6NFK. The one in front a 6XA-FM. Could you please pass this info to your club members at the next meeting. If anyone has an interest I can be contacted at this E-mail address and will be happy to provide more detailed photos upon request.

Thank You Very Much
Steve
